Press Release

Alter-G Announces \$2.5 Million Round of Funding

Funds to drive global sales expansion and product innovations

June 23, 2009, Menlo Park, CA – Alter-G, Inc., developers of the innovative G-Trainer anti-gravity treadmill, today announced an agreement with a group of current and new investors providing a combined \$2.5 million in Series A1 capital funding.

Key investors include Frog & Peach Investments of San Francisco, CA, Astrolabe Ventures of Palo Alto, CA, and Funk Ventures of Santa Monica, CA.

"We are pleased with the confidence our investors place in our significant opportunity and their trust in management's ability to execute," said Lars Barfod, CEO of Alter-G. "Over the past year we have substantially validated our technology, product and target markets. We will use the funds to expand sales and marketing activities, develop new products and intellectual property and conduct clinical trials."

The company's innovative G-Trainer anti-gravity treadmill, based on NASA technology, is attracting increasing interest from major medical centers and physical therapy clinics since receiving FDA approval in February 2008. The company's patented partial weight-bearing technology reduces the impact on lower extremities, allowing patients to run or walk normally while freely adjusting their body weight - thereby eliminating pain and reducing the risk of further injury.

The G-Trainer is currently in use by many professional sports teams, private and military hospitals, and rehabilitation centers around the country. Therapeutic treatment programs include recovery from any type of lower body disability resulting from disease, injury or surgery, Parkinson's disease, arthritis, obesity, and sports or aerobic conditioning.

About Alter-G

Alter-G Inc., a Silicon Valley company founded in 2005, sets the standard for results-oriented, body weight support equipment, enabling individuals to improve mobility and health, recover more rapidly from injury and surgery, overcome medical challenges, and enhance physical performance. The company's patented gravity differential technology was developed at NASA and prototype-tested by Nike's Oregon Project for distance runners. Health and medical clinics, rehabilitation and training facilities, professional athletes, and top collegiate programs across the U.S. use the company's G-Trainer anti-gravity treadmill to provide the unique benefits of walking and running at reduced body weight for their patients.
